

OSINT INVESTIGATION & INTELLIGENCE GATHERING

Report By: Shravani Joshi

Executive Summary

This report presents the findings of an Open Source Intelligence (OSINT) investigation conducted on the target website <https://www.chicken-road2.app/> using publicly available resources. The objective of the investigation was to gather information about the website's domain, network infrastructure, DNS configuration, hosting environment, SSL certificate, security headers, technologies used, and other publicly accessible information without performing any intrusive activities.

The investigation revealed that the website is registered through Key-Systems LLC, uses Cloudflare for DNS management and content delivery, and is accessible over both IPv4 and IPv6 networks. A valid SSL/TLS certificate is configured to secure communications, and the website is built using the Next.js framework. Publicly accessible files such as robots.txt were also identified, providing information about search engine crawling rules and the location of the website's sitemap.

Overall, no sensitive information or publicly accessible subdomains were identified during the investigation. However, several recommended HTTP security headers were found to be missing, resulting in a low security headers rating. The findings provide an overview of the website's externally visible security posture and highlight areas where security can be further strengthened.

1. Domain Information

Website Used:

Whois.com

Source URL:

<https://www.whois.com>

Output:

The screenshot shows the Whois.com search results for the domain **chicken-road2.app**. The domain is listed as "Updated 2 days ago" and has a "Make offer" button. The "Domain Information" section provides details about the domain's registration, expiration, and status. The "Registrar Information" section provides details about the registrar, Key-Systems LLC. A sidebar on the right lists similar domains for sale, including chickenroad2s.com, chickenroad2farm.com, steakroad2.com, bbqroad2.com, steakroad2.net, and chickenroad2s.net, each with a "Buy Now" button. A large red banner at the bottom right promotes ".space" domains for sale at \$1.18, down from \$29.88, with a "BUY NOW" button.

Registrant Contact	
State:	South Yorkshire
Country:	GB
Email:	info@domain-contact.org

Technical Contact	
Country:	GB
Email:	info@domain-contact.org

Information Found:

- Domain Name: chicken-road2.app
- Registered On: 13 May 2025
- Expires On: 13 May 2027
- Last Updated On: 04 May 2026
- Domain Status: Client Transfer Prohibited
- Name Servers:
 - autumn.ns.cloudflare.com
 - denver.ns.cloudflare.com
- Registrar: Key-Systems LLC
- IANA ID: 1345
- Registrant Country: United Kingdom (GB)
- Registrant State: South Yorkshire
- Registrant details are protected using a privacy contact service.

Inference:

The domain was registered in May 2025, indicating that it has been active for a relatively short period. DNS resolution is managed through Cloudflare name servers, suggesting that Cloudflare is being used for DNS management. The Client Transfer Prohibited status indicates that the domain is protected against unauthorized transfer requests. Public WHOIS records do not disclose the registrant's identity, as a privacy protection service has been applied, limiting the availability of ownership information.

CHECK DNS PROPAGATION

Whether you have recently changed your DNS records, switched web host, or started a new website, checking whether the DNS records are propagated globally is essential. DNS Checker provides a free DNS propagation check service to check Domain Name System records against a selected list of DNS servers in multiple regions worldwide. Perform a quick DNS propagation lookup for any hostname or domain, and check DNS data collected from all available DNS Servers to confirm that the DNS records are fully propagated.

- The domain resolves to two IPv4 addresses:
 - 104.21.38.193
 - 172.67.137.239
- The A records were successfully resolved from multiple DNS servers across different geographic locations.
- DNS propagation is consistent, indicating that the records are publicly accessible worldwide.

The website resolves to two public IPv4 addresses, indicating that traffic is distributed across multiple endpoints. The consistent resolution across global DNS servers confirms that the domain is correctly configured and reachable from different regions.

Information Found:

- **A Record:** Present, resolving to the IPv4 addresses 104.21.38.193 and 172.67.137.239.
- **AAAA Record:** Present, resolving to IPv6 addresses.
- **CNAME Record:** No CNAME record found.
- **MX Record:** No MX records found.
- **NS Record:** No NS records found.
- **TXT Record:** No TXT records found.
- **SOA Record:** No SOA record found.

Inference:

The domain is configured with both IPv4 and IPv6 addressing, allowing access over both Internet protocols. No CNAME, MX, TXT, NS, or SOA records were returned by the lookup, indicating that these records are either not publicly exposed through this query or are not configured for the domain. The absence of MX records suggests that the domain is not configured to receive email directly, while the lack of publicly visible TXT records means no email authentication or verification records were identified during this lookup.

4. Hosting Provider

Website Used:

Shodan

Source URL:

<https://www.shodan.io/>

Output:

The screenshot shows the Shodan search results for the IP address 104.21.38.193. The interface includes a map of the San Francisco area at the top. Below the map, the IP address 104.21.38.193 is displayed with options for 'Regular View', 'Raw Data', 'Timeline', and 'Whois'. The main content area is divided into two columns. The left column, titled 'General Information', lists details such as Hostnames (immobilizzazioni.it, napili.com), Domains (immobilizzazioni.it, napili.com), Country (United States), City (San Francisco), Organization (Cloudflare, Inc.), ISP (Cloudflare, Inc.), and ASN (AS13335). The right column, titled 'Open Ports', shows a list of open ports: 80, 443, 2052, 2053, 2082, 2083, 2086, 2087, 2095, 2096, 8080, 8443, and 8880. Below the open ports, there are two sections: '80 / TCP' showing a '301 Moved Permanently' status and '443 / TCP' showing a 'Napili Point Resort' status.

Information Found:

- IP Address: 104.21.38.193
- Organization: Cloudflare, Inc.
- ISP: Cloudflare, Inc.
- ASN: AS13335
- Country: United States
- City: San Francisco
- The IP address is identified as part of the Cloudflare CDN.
- Multiple open ports, including 80 (HTTP) and 443 (HTTPS), were detected.

Inference:

The website is served through Cloudflare's content delivery network (CDN), indicating that Cloudflare is responsible for handling incoming traffic and providing network services such as caching and protection. Since the website is behind Cloudflare, the actual origin server is not publicly exposed through this IP address. The presence of standard web service ports confirms that the website is accessible over both HTTP and HTTPS.

Test	Result
✓ HTTP Connect	200 OK
✓ HTTP Filter	
✓ HTTP Delay Check	Success - response in 374 ms
✓ HTTPS Certificate Check	
✓ HTTPS Certificate Expiration	

Information Found:

- The website uses a valid SSL/TLS certificate for chicken-road2.app.
- Certificate Issuer: WE1
- Valid From: 04 July 2026
- Valid Until: 02 October 2026
- Certificate Algorithm: SHA-256 ECDSA
- The certificate chain is trusted through Google Trust Services (GTS Root R4) and GlobalSign Root CA.
- HTTPS connectivity test returned **200 OK**.
- HTTPS certificate check completed successfully.
- Server response time was approximately **374 ms**.

Inference:

The website uses a valid SSL/TLS certificate issued by a trusted certificate authority, enabling encrypted communication between users and the server. The successful HTTPS validation and certificate chain indicate that the certificate is properly configured and trusted by modern browsers. The HTTP status code 200 OK confirms that the website is accessible over HTTPS, and the response time indicates normal server responsiveness.

✔ Strict-Transport-Security

✖ Content-Security-Policy

✖ X-Frame-Options

✖ X-Content-Type-Options

✖ Referrer-Policy

✖ Permissions-Policy

Advanced:

Your site could be at risk, let's perform a deeper security analysis of your site and APIs:

Start Now

Missing Headers

Content-Security-Policy

Content Security Policy is an effective measure to protect your site from XSS attacks. By whitelisting sources of approved content, you can prevent the browser from loading malicious assets.

X-Frame-Options

X-Frame-Options tells the browser whether you want to allow your site to be framed or not. By preventing a browser from framing your site you can defend against attacks like clickjacking. Recommended value "X-Frame-Options: SAMEORIGIN".

X-Content-Type-Options

X-Content-Type-Options stops a browser from trying to MIME-sniff the content type and forces it to stick with the declared content-type. The only valid value for this header is "X-Content-Type-Options: nosniff".

Referrer-Policy

Referrer Policy is a new header that allows a site to control how much information the browser includes with navigations away from a document and should be set by all sites.

Permissions-Policy

Permissions Policy is a new header that allows a site to control which features and APIs can be used in the browser.

Information Found:

- Overall Security Headers Rating: **D**
- **Present Security Header:**
 - Strict-Transport-Security (HSTS)
- **Missing Security Headers:**
 - Content-Security-Policy (CSP)
 - X-Frame-Options
 - X-Content-Type-Options
 - Referrer-Policy
 - Permissions-Policy
- The response headers indicate:
 - Server: Cloudflare
 - X-Powered-By: Next.js
 - Content Encoding: gzip
 - Cache Status: DYNAMIC
 - HTTP/2 is supported.

Inference:

The website has implemented the Strict-Transport-Security (HSTS) header, which helps ensure that connections are made over HTTPS. However, the overall D rating indicates that several recommended security headers are missing. The absence of headers such as Content-Security-Policy, X-Frame-Options, and X-Content-Type-Options may reduce protection against common web-based attacks, including cross-site scripting (XSS), clickjacking, and MIME-type confusion. Additionally, the response headers reveal that the application is served through Cloudflare and is built using Next.js, providing insight into the underlying web infrastructure.

7. Technologies Used

Website Used:

BuiltWith

Source URL:

<https://builtwith.com/>

Output:

The screenshot displays the BuiltWith website profile for CHICKEN-ROAD2.APP. The page is divided into several sections:

- Header:** Includes the BuiltWith logo, navigation links (Tools, Features, Plans, Customers, Resources), and a search bar with the text "Website, Tech, Keyword" and a "Lookup" button.
- Technology Profile:** A tabbed interface with "Detailed" selected. It lists various technologies used on the website.
- Frameworks:** A section titled "Frameworks" with a "Global Trends" link. It lists:
 - Next.js:** A React.js framework for static site generator apps. Owned by Vercel. Includes links for "Next.js Usage Statistics" and "Download List of All Websites using Next.js".
 - Organization Schema:** A schema for organizations. Includes links for "Organization Schema Usage Statistics" and "Download List of All Websites using Organization Schema".
- Mobile:** A section titled "Mobile" with a "Global Trends" link. It lists:
 - iPhone / Mobile Compatible:** The website contains code that allows the page to support iPhone / Mobile Content.
 - Apple Mobile Web Clips Icon:** This page contains an icon for iPhone, iPad and iTouch devices.
 - Viewport Meta:** This page uses the viewport meta tag which means the content may be optimized for mobile content.

Information Found:

- Frontend Framework: Next.js
- Schema Markup: Organization Schema
- Mobile Compatibility: iPhone/Mobile Compatible
- Apple Mobile Web Clips Icon is configured.
- Viewport Meta tag is implemented for responsive web design.

Inference:

The website is built using Next.js, a React-based framework commonly used for developing modern web applications. The presence of Organization Schema indicates that structured data has been implemented to improve how the website is interpreted by search engines. Mobile-specific configurations, including viewport settings and Apple Web Clips support, suggest that the website is optimized for mobile devices and provides a responsive browsing experience.

8. robots.txt & sitemap.xml

Website Used:

Web Browser

Source URL:

<https://www.chicken-road2.app/robots.txt>

Output:

```
User-Agent: *
Allow: /
Disallow: /api/*
Disallow: /go/*
Disallow: /pages/condition-utilisation

User-Agent: AhrefsBot
Disallow: *

User-Agent: SemrushBot
Disallow: /

User-Agent: dotbot
Disallow: *

User-Agent: Screaming Frog SEO Spider
Disallow: *

User-Agent: ChatGPT-User
Disallow: /

Sitemap: https://www.chicken-road2.app/sitemap.xml
```

Information Found:

- The robots.txt file is publicly accessible.
- All user agents are allowed to crawl the website (Allow: /).
- The following paths are restricted from crawling:
 - /api/*
 - /go/*
 - /pages/condition-utilisation
- Specific bots such as **AhrefsBot**, **SemrushBot**, **dotbot**, **Screaming Frog SEO Spider**, and **ChatGPT-User** are restricted from accessing all pages.
- The robots.txt file references a sitemap located at:
 - <https://www.chicken-road2.app/sitemap.xml>

Inference:

The website provides a publicly accessible robots.txt file that defines crawling rules for search engines and automated bots. Sensitive paths, including API endpoints and specific application

pages, are excluded from indexing, reducing unnecessary exposure to search engines. The presence of a sitemap reference indicates that the website maintains a structured list of publicly accessible pages to support search engine indexing.

Subdomains	crt.sh	https://crt.sh
robots.txt & sitemap.xml	Web Browser	https://www.chicken-road2.app/robots.txt

Intelligence Analysis

The OSINT investigation provided valuable insight into the publicly accessible infrastructure of the target website. The domain is relatively new, having been registered in 2025, and is managed through a reputable domain registrar. Cloudflare is used for DNS management and content delivery, which helps conceal the origin server and provides additional performance and security benefits.

The website supports both IPv4 and IPv6 connectivity, indicating compatibility with modern networking standards. HTTPS has been properly implemented using a valid SSL/TLS certificate issued by a trusted certificate authority, ensuring encrypted communication between users and the website.

Technology fingerprinting identified the use of the Next.js framework, indicating that the application is built using a modern web development stack. The publicly accessible robots.txt file provides crawler instructions and references the website's sitemap while restricting indexing of selected application paths.

No publicly identifiable subdomains were discovered through Certificate Transparency logs, and no publicly accessible email-related DNS records were identified during the investigation.

The primary security observation identified during the assessment is the absence of several recommended HTTP security headers, including Content-Security-Policy, X-Frame-Options, X-Content-Type-Options, Referrer-Policy, and Permissions-Policy. These missing headers reduce browser-level protection against common web-based attacks such as clickjacking and cross-site scripting. Although this does not confirm the presence of vulnerabilities, implementing these headers would improve the website's overall security posture.

Recommendations

- Implement the missing HTTP security headers, including Content-Security-Policy (CSP), X-Frame-Options, X-Content-Type-Options, Referrer-Policy, and Permissions-Policy, to strengthen browser-side security.
- Continue using HTTPS and ensure SSL/TLS certificates are renewed before expiration.
- Regularly review DNS records and remove any unnecessary public records to minimize information exposure.

- Periodically review the robots.txt file to ensure that only intended resources are publicly referenced.
- Perform regular security assessments and vulnerability scans to identify potential weaknesses in the application's configuration.
- Continue using Cloudflare or similar protective services to improve availability and provide protection against common network-based attacks.
